## Lab 2 Group 3

## **College Work Organizer System**

There are three users in this system- admin, faculty, and the students. The faculty and students have to register themselves before using the system and the admin's role is just to maintain all registered users. The faculty will upload the necessary study materials and assignments related to his/her subject and the students can read the study materials. This will reduce the paperwork and wastage of time for teachers and students.

## Interfaces **User Requirements:** Admin is able to maintain all registered users World assumptions: Facility is able to upload Program: Machine: All Faculty have study material related to Students their subject All Students have Students will have S Facility accesses to the study materials related to their All students are subject matter allowed access to study material Software Requirements: Facility have access to their Having a database with study materials all students and facility Study material for the admin to manage already exists Having the ability to upload and dictate access to certain files
